Re: Versamid® F-11 production location change notice

Dear Gabriel Customer:

Gabriel Performance Products purchased the liquid epoxy curing agent product line from BASF in December 2015. The purchase included the manufacturing know-how, product specifications, and the VERSAMID® tradename.

These products are offered by Gabriel and may be produced at any of 4 Gabriel manufacturing locations. VERSAMID® F-11 was initially produced in our Ashtabula, Ohio plant. Effective immediately, production will be moved to our facility in Skippack, PA. The manufacturing location is changing, however the product will be the same product and produced to the same specifications you have sourced in the past.

Please note that the drum weight will change to 440 LBS (199.58 KG). It was previously 454 LBS.

Thank you for your past purchases. If you have any questions or concerns, please contact your sales representative.

Sincerely,

Marianne Riemer
Gabriel Performance Products
